Aquifer storage and recovery - Plans Wikipedia

Aquifer storage and recovery (ASR) is a water resources management technique for actively storing water underground during wet periods for recovery when needed, usually during dry periods. The timeframe can range from months to decades.

Aquifer Storage and Recovery - USGS
Aquifer recharge (AR) and aquifer storage and recovery (ASR) are manmade processes or natural processes enhanced by humans that convey water underground. The processes replenish ground water stored in aquifers for beneficial

Aquifer Recharge and Aquifer Storage and Recovery ...

Aquifer Storage and Recovery is capturing water when it is abundant such as a rainy season or during spring snow melts, storing the water in the subsurface in brackish aquifers, and recovering the water when needed. There are two types of aquifers, confined and unconfined. A confined aquifer is a closed system and, for these

recovery and use. An aquifer is an underground layer of sand, gravel or rock through which water can pass and is stored. The concept of ASR is similar to a savings account at a bank — drinking water is injected (deposited) during wet years and stored indefinitely.

Aquifer Storage and Recovery (ASR) facilities have been used in Florida and throughout the United States for about 40 years. ASR facilities inject and recover treated and untreated groundwater, partially treated surface water and reclaimed wastewater. ASR technology can store more water than a typical aboveground reservoir.

Aquifer storage and recovery (ASR) has proven to be a cost-effective way to capture and store water when it is available so it can be used during times when it is limited. Groundwater storage can serve the same purposes as surface water reservoirs, without many of the issues and costs associated with dams.

Introduction. Aquifer storage and recovery (ASR) is the underground storage of water in aquifers using wells. The general advantages of subsurface storage have been well documented (Huisman and Olsthoorn 1983; Pyne 1995, 2005; Bouwer 2002; Dillon 2005; Maliva and Missimer 2010, 2012) and include often very large storage volumes, avoidance of water losses due to evaporation, a reduced threat of ...
