Cross-validation Folds 10

In classical settings where the data points are assumed to be an independent and identically distributed sample, cross-validation works by splitting the data into multiple parts, or folds, holding out one fold at a time as a test set, fitting the model on the remaining folds and computing its error on the held-out fold, and finally averaging the errors across all folds to obtain the cross-validation error.

Metode Pengujian 3 Fold Cross Validation - Kuliah Komputer ...

To obtain reliable accuracy estimation, k - fold cross-validation (CV) is commonly used: one fold of data is reserved in turn for test. FS may be performed only once at the beginning and subsequently the results of the two algorithms can be compared using CV; or FS can be performed k -times inside the CV loop.
