Results: The literature review highlighted the possible effect of specific functional foods such as coffee, green tea, berries, nuts, olive oil, pomegranate, avocado, and ginger. Specific bioactive compounds of those foods-such as caffeine, catechins, gallic acid, anthocyanins, ascorbic acid, polyphenols, oleuropein, capsaicin, and quercetin-may contribute to weight management, obesity prevention, and obesity's metabolic consequences.

In this textbook, Bioactive
Compounds and Cancer, we have
compiled review articles that
discuss functional food
components specifically for
treating cancer, including
isoflavones, bioactive functional
foods, bioactive compounds,
biomarkers, phyto-
chemotherapeutic agents,
nanoparticles, and flavonolignans.

Polyphenols, carotenoids, and peptides are the most studied bioactive compounds. Bioactive components, such as chitosan, polyunsaturated fatty acids, and astaxanthin from marine animals and tocopherols of oils of plant origin have excellent potential as functional food ingredients, since they have health benefits.
